BRIEF INTRODUCTION

This study explores the impact of product discounts on the spending behavior of students, particularly in response to economic challenges and marketing strategies. It examines how promotional tactics influence purchasing decisions, often leading to impulsive buying and financial mismanagement. Given the financial constraints students face, understanding these behaviors is essential for promoting responsible budgeting and informed decision-making. By analyzing the spending patterns of Senior High School students at Ateneo de Davao University, this study aims to address gaps in existing research. Ultimately, the findings seek to enhance financial awareness and encourage disciplined spending habits among students.

CONCLUSION

In conclusion, while discounts influence immediate spending decisions, students' financial habits are primarily determined by their financial awareness and external financial influences. Product discounts influence short-term purchasing behaviors, financial literacy and external influences play a more dominant role in shaping long-term financial habits.

BEFORE RECEIVING PRODUCT DISCOUNTS

Grade 12 learners at Ateneo de Davao University Senior High School demonstrate practical spending habits, emphasizing essential needs and price sensitivity while limiting non-essential purchases before encountering product discounts. The higher the price the lower the customers will purchase, which aligns with the student's tendency to prioritize essential items over non-essentials (Zhao et al., 2021).

AFTER RECEIVING PRODUCT DISCOUNTS

Many students maintained a balance between emotional gratification and rational decision-making. Students balanced impulsive buying with financial discipline, showing a thoughtful spending approach despite discounts. While discounts drive short-term purchasing activity, consumers often return to their regular spending habits (Nishio and Hoshino, 2024).

t-Test: Paired Two Sample for Means		
	BEFORE	AFTER
Mean	3.069009585	3.263578275
Variance	0.319773695	0.295335873
Observations	313	313
Pearson Correlation	0.203759258	
Hypothesized Mean Difference	0	
df	312	
t Stat	-4.91816185	
P(T<=t) one-tail	7.07773E-07	
t Critical one-tail	1.649752124	
P(T<=t) two-tail	1.41555E-06	
t Critical two-tail	1.967596497	

The mean spending increased from 3.069 before discounts to 3.263 after, with a t-statistic of -4.918 and a p-value of 1.42×10^{-6} (two-tailed), which is much lower than the critical t-value of 1.968. The results suggest that product discounts have a measurable impact on students' purchasing decisions, leading to increased expenditures.

These findings support research on consumer behavior, showing that discounts create urgency and perceived value, leading to higher spending (Thorpe, 2023). Promotional pricing can disrupt budgets and encourage impulsive buys (Wahyundi, 2017; Montoya et al., 2019), but financial literacy helps students regulate spending (Gutter & Copur, 2015). This underscores the need for financial education to prevent marketing-driven overspending.
